Candidate MPPI weight $w_k / \max_k w_k$ ($K = 256$ rollouts, $H = 20$ steps)
Arm pose at planning step $t = 34$
Lowest-cost latent rollout
Recorded EE path $t = 34 \to 54$
EE decoded from $\mathbf{z}_t$ (rollout origin)
Grasp target (payload at contact, $t = 54$)
Head event camera $C_{0:1}$
Wrist event camera $C_{2:3}$
